

MicroClimate Control PPS4 (active)

Ex Tax: 0.00€

A recirculating system is designed to provide accurate and reliable relative humidity control for a single enclosure. With a capacity of up to 240 ft³ / 8 m³ or more, depending upon case leakage rates and ambient temperature variations. Sensitive artifacts are constantly surrounded by humidity air generate and controlled by the system. The PRE-4 will maintain constant relative humidity levels in an enclosure even as the ambient temperature in the surrounding gallery changes.
