

MicroClimate Control PPS30 (active)

Ex Tax: 0.00€

This is a positive pressure humidity control system designed specifically to provide safe and effective humidity control for museum display or storage enclosures. A single unit can provide an entire gallery of display cases - all supplied from a MCG 30 at 50 meters away. The system will maintain constant relative humidity levels even the ambient temperature in the gallery fluctuates (affected by the number of visitors, outside temperature and HVAC ON/OFF cycles), the system will maintain constant relative humidity levels inside the display cases. Because of the positive air pressure supply to display cases dust, pollutants are prevented and off-gases from artifacts are constantly flushed.
