

## Spun chair

Ex Tax: 699.00€

Spun chair. Rotational molded polyethylene or polycarbonate. Spun came out of research into the geometric simplification of a familiar object type. Could a completely rotationally symmetrical form make a comfortable chair? The result is not immediately apparent as a chair and when upright looks more like a sculptural vessel. When lent on its side however, Spun forms a comfortable and functional chair that the sitter can rock from side to side, or even spin around in a complete circle. Design Thomas Heatherwick, 2010.
