

AB Series Aircone, 10-Pack (κρεμαστό) 465x405x85 w/ Gabriel Europost fabric

Ex Tax: 135.00€

The innovative Aircone is based on the successful Airflake, which was the first product designed by Stefan Borselius in collaboration with Abstracta in 2006. Unlike Airflake, Aircone forms a different pattern as it has a larger design based purely on straight lines. The modules are assembled together using small plastic clips, and each module is angled and has a tapered shape. The angles diffuse sound waves, and the product thus helps create a better sound environment. Aircone is made from compression-moulded fabric-covered fibre felt and is available in a range of colours.
