

Reemay (F) 19gsm 1219mm x 25M roll

Ex Tax: 23.04€

Acid free, random-spunbonded 100% polyester, now available in 3 thicknesses in rolls. Reemay has proved over many years to be a strong inert material for preservation and conservation methods. It retains its physical properties when wet and is dimensionally stable during humidity changes. Reemay is used in paper infill, a drying support media, lining, interleaving and backing. It can be used over and over again withstanding being laundered. It is more fibrous than Holytex, which is reflected in the price, because Holytex is cullendered for longer in manufacture.
