

Steam Cleaner MPS-1-CD Micro Precision

Ex Tax: 0.00€

The Micro Precision Steam Cleaner is a small, table top, portable steam cleaner which instantly converts distilled water to high pressure, super-heated steam. The MPS is effective for removing grease, oil, flux, adhesive, fingerprints and many other contaminants. It makes use of patented design elements that allow steam to be rapidly generated while never coming into contact with any components other than stainless steel and Teflon. There is no copper, aluminum, or steel to corrode and contaminate the substrate being cleaned. Steam is never stored under pressure, so the MPS is safer than other steam cleaners. The MPS uses less water to do more cleaning, which means less waste to dispose of. Surfaces are often warmed enough during cleaning to dry quickly. Provides 100% continuous steam. Temperature and Pressure can be selected. All wetted parts are stainless steel. Straight grip nozzle. Ideal for intermittent ultra pure high-tech cleaning.
