Use of a Light Emitting Capacitor (LEC). Based on electroluminescent, flexible, lightbulb technology, with light emitting phosphors. The light panels are powered by an AC signal. Power adapters convert standard 230Volts 50 Hertz AC into the required AC voltage and frequency needed to light the panels at a predetermined brightness. External dims : 210 mm x 297 mm, internal : 188 mm x 275 mm
