

S-ER Series Topsit Pagwood 5 seater

Ex Tax: 0.00€

Topsit contemporary-style outdoor seating units have laser-cut frames and a choice of wire mesh or Pagwood composite slat seat and back. The 4mm gauge wire is set in a 15x30mm pattern, with wires terminating inside a special profile. Upper wires run transverse to seat direction, and two areas of denser mesh conceal the thermal cut parts and provide additional seat strength. The wire mesh is galvanised and Rislun polyamide coated (min. thickness 350µm). Seating units are available with or without arm-rests and back-rests. They can be supplied in 2, 3, 4 and 5 seat straight variants or 4, 8, 12 or 16 seat circular variants. Perforated steel versions can also be specified.
