

## **ZGCN Series PC CRYSTAL ("Vegetal" Inspired) chair**

Ex Tax: 94.65€

ΣΕΙΡΑ ZGCN-32-0017 Σταθερό πολυχρηστικό κάθισμα και για εξωτερικό χώρο. Κατασκευή εξ' ολοκλήρου από ακρυλικό /πλέξιγκλας. Διαστάσεις: Π590 x Β600 x Υ800(ΥΕ450). Κατασκευή από Makrolon® της Bayer. In a development process that took four years, Ronan and Erwan Bouroullec worked with Vitra to create a universal chair for indoors and outdoors whose contours seem borrowed from nature. Vegetal features flat branch structures woven in three levels to form a round, slightly irregular seating shell. On the underside, the chair is stabilized by ribs that grow out of the supportive legs. The original inspiration for the project came from historical gardens of the 20th century, where young trees grew into furniture-like structures through continual care and deliberate pruning. The guiding question for the designers was how to construct a chair that would most closely approximate the idea of a grown chair. In coming up with new structures and construction forms, Ronan and Erwan Bouroullec researched the various cultural and historical aspects. Vegetal should not only be seen in the context of the design and furnishing of historic gardens. It also corresponds to current trends towards the flexible use of weatherproof furniture in interiors, in the garden or on the terrace.
