

Monitor Temperature + Humidity PCE-310

Ex Tax: 189.84€

Humidity Detector for measuring humidity, temperature, dew point, can also measure surface temperature using an optional external sensor. The PCE-310 Humidity Detector is an exceptional device with a low price. This Humidity Detector will determine climate conditions including temperature and humidity, and will also measure surface temperature using an optional external sensor. This Humidity Detector will also include details such as dew point and wet bulb temperature. One potential use could be to prevent fungus when food is being transported or kept in storage. It is also very helpful in the construction sector. Workers often complain about not having a device available to measure environmental conditions and wall temperature. It is frequently found to be used in the industrial sector and product development. On top of these uses it can be recalibrated in situ using optional calibration equipment, or can be sent to have a DIN ISO accredited calibration which is recommended to be done annually. Specs : Measures humidity and temperature by way of an internal sensor and surface temperature using an optional external sensor, Determines dew point and wet bulb temperature, Calculates and shows the T1 - T2 (internal - external), option calibration equipment is available, optional ISO laboratory calibration certificate is available, Especially useful for the storage sector, HACCP, climate control and ventilation, problems in the construction industry.
