

Monitor / Sensor T210 thermo hygrometer

Ex Tax: 255.60€

Precision measuring device for building climate control with outstanding measurement accuracy. The precision sensors of the T210 are protected against dust and dirt by a metal grid filter inside the measuring head of the device and enable the quick and accurate determination of air and dew point temperature as well as of the relative, absolute and specific air humidity. Technical data: Air temperature measuring range: -20°C ... +50°C. Air humidity measuring range: 5...95 % RH. Air temperature resolution: 0.1 °C. Air humidity resolution: 0.1 % RH. Air temperature accuracy: $\pm 0.2^{\circ}\text{C}$ (0 to 40°C) otherwise $\pm 0.4^{\circ}\text{C}$. Air humidity accuracy: $\pm 2\%$ RH.
