

Data Logger Temperature + Humidity DL200D Prof

Ex Tax: 801.84€

Professional data logger for long-term recording of climatic data with USB and LAN interface, 16 MB memory and included professional software. For climate monitoring with up to 20 parallel measurement channels. Thanks to its flexible combination of real time data display, long term detection and logging of all measured values, even in network mode, the DL200D is the perfect measured data collector and an essential accessory for all precision measurements. Especially for calibration and testing laboratories. A few practical benefits of the DL200D: Maintenance free made-in-Germany quality measuring devices. Tamper-proof measured value detection and documentation. Perfect for measuring over a long period. Simultaneous recording of up to 20 separate measuring channels. Network function (LAN). Low energy consumption. Flexible power supply via batteries or USB – or optionally with PoE, also via LAN. Timer function, variable measured intervals, alarm function for each measuring channel. Three row LCD for displaying measured values. Including pro software.
