

Data Logger Tinytag Radio - TGRF3024

Ex Tax: 791.00€

Radio temperature data logger for use with four thermistor probes. -40 to +125°C (x4). Requires Radio Probes. The TGRF-3024 monitors temperatures from -40 to +125°C using four of the Tinytag Radio thermistor probes. Like the logger, the majority of our thermistor probes are waterproof and suitable for outdoor and industrial applications. This logger is a component part of the Tinytag Radio data logging system, which automatically sends data from multiple loggers via a receiver for viewing on a PC. Remember: this logger is part of a system that also requires a receiver and our software in order to work.
