

Tess Series Clarity Store Cabinet 900 / 1990

Ex Tax: 4,297.60€

Manufactured from high quality 1.2 gauge CR4 rolled steel, with a fully welded external casing for long lasting strength and rigidity. Each unit is fitted with heavy duty levelling feet to compensate for uneven floor surfaces. The standard shelving is made from the same materials as the outer carcass. Max shelf loading 80kg. All overlaps and joints are sealed using inert silicone materials. Units are designed to achieve a minimum of 0.5 air exchange rate – this can be improved to 0.1 AER on request. The doors are fitted with extruded silicone compression seals to keep out dust and pollutants. Each unit type is equipped as standard with an internal pitching system allowing incremental adjustments of 13mm. The doors are glazed with 6.4mm thick laminated glass and embedded hinges to create an almost airtight seal. Doors open to over 90° and the full height steel hinges do not deflect or distort in operation. The range is equipped with a single-point key based Abloy locking system, with double point internal locaters for added security. Individual cabinet price includes 3 x shelves as standard.
