

bookworm bookshelf- short

Ex Tax: 510.00€

The creativity of an artist, combined with the technology of a great company, gives life to a project for a bookcase made on an industrial scale that can rightfully be considered the most daring and revolutionary in the world: Bookworm, the flexible bookcase. A careful analysis of extrusion technology has enabled a sinuous bookcase to be created, taking on the desired form, without this jeopardising its toughness and functionality. Available in three different lengths, Bookworm combines flexibility and high resistance, allowing a load of around 20lbs. for each support. Batch-dyed pvc. Design Ron Arad, 1994.
