

Solvent Dispenser 240ml bottle

Ex Tax: 24.55€

The pump and seal mechanism ensures that the contents are not contaminated by the dispensed solvent dripping back into the bottle. By simply applying light pressure of a brush on the dispensing dish, the high quality stainless steel pump releases just the right amount of solvent. Designed to ensure the minimum evaporation of dangerous solvent fumes. The moulded polyethylene bottle is shatterproof. A precision valve keeps the solvent sealed from the atmosphere.
